BINDAGRAPHICS ACQUIRES High-Speed 40" Laminator

Baltimore, MD, July 23, 2012 – Bindagraphics, a leading trade bindery, finishing and packaging company, recently installed a new 40" GBC Saturn 8556 Laminator.

The 40" Laminator runs all types and gauges of thermal laminates-from layflat to matte, nylon to polyester. It accommodates sheet sizes up to 44"x 56" and runs at speeds up to 5,000 sheets per hour.

Matt Anson, President of Bindagraphics, remarks "We've always offered one and two sided laminating, but being able to run 40" wide means lower prices on material and labor, and shorter schedules, which allows our customers to be more competitive. Together with our new 40" screen press for spot UV, we offer our customers a cost effective one-stop shop for any finishing effect desired."
